CONTENTS

Chapter 1. A HYBRID FDFD-BIE APPROACH TO TWO-DIMENSIONAL SCATTERING FROM AN INHOMOGENEOUS BIISOTROPIC CYLINDER

M. Norgren

1	Introduction	2
2	The Scattering Problem	4
3	The FDFD Equations	5
4	Absorbing Boundary Condition in Terms of a BIE ...	10
4.1	A Global ABC	10
4.2	MoM Approximation of the ABC and the Interlacing with the FDFD Equations	10
5	Numerical Examples	13
5.1	Verification of the Global Absorbing Boundary Condition	13
5.2	Circular Dielectric Cylinder	14
5.3	Circular Chiral Cylinder and Circular Tellegen Cylinder	16
5.4	Cylinder Having Non-circular Cross-section	17
6	Discussion and Conclusions	23
Appendix A. About the Exact Solution for a Homogeneous Circular Cylinder		24
References		25

Chapter 2. BEHAVIOR OF THE REGULARIZED SAMPLING INVERSE SCATTERING METHOD AT INTERNAL RESONANCE FREQUENCIES

N. Shelton and K. F. Warnick

1	Introduction	30
2	Regularized Sampling Method	31
2.1	Alternate Derivation	31
3	Internal Resonance Frequencies	34
3.1	Circular Cylinder	35
4	Numerical Results	36
4.1	Near Field Simulations	36
4.2	Image Contrast	38
5	Conclusion	43

Acknowledgment	44
References	44

Chapter 3. SURFACE GREEN’S FUNCTION OF THE HELMHOLTZ EQUATION IN SPHERICAL COORDINATES

T. Rother, M. Kahnert, A. Doicu, and J. Wauer

1 Introduction	49
2 The Exterior Boundary Value Problem in Spherical Coordinates and Boundary Integral Equation Methods	51
2.1 Formulation of the Boundary Value Problem	51
2.2 Solution in the Limiting Case of a Spherical Boundary Surface and the Related Surface Green’s Function	54
2.3 Boundary Integral Equation Methods	55
3 The Surface Green’s Function for Non-Spherical Boundary Surfaces.....	58
3.1 Questions and Answers	58
3.2 General Least-Squares Approach and the Corresponding Surface Green’s Function	61
3.3 The Surface Green’s Function in Spherical Coordinates ..	65
4 Derivation of the Surface Green’s Function by Use of the Method of Lines	66
4.1 The Discretization Procedure for Axisymmetric Boundary Surfaces	66
4.2 Representation of the Solution	69
4.3 Representation of the Surface Green’s Function.....	73
4.4 The Limiting Behaviour of the Surface Green’s Function for an Infinite Number of Discretization Lines	74
5 Surface Green’s Function for Particles with Discrete Symmetries.....	75
5.1 Symmetry Relations of the Surface Green’s Function ...	77
5.2 Equivalent Symmetry Relations of the Geometry Factors $\mathbf{A}_{\partial\Gamma}^{-1}$	82
5.3 Proof of Symmetry Relations for the Least-Squares and Waterman Solution Scheme	85
5.4 Classification of Particle Symmetries by Point-Groups ..	90
6 Conclusions.....	91
Appendix A. Proof of the Weak Convergence of the SGF Derived in Sec. 3.2 of this Paper.....	92

References	93
------------------	----

**Chapter 4. ANALYTICAL MODEL FOR REGULAR
DENSE ARRAYS OF PLANAR DIPOLE
SCATTERERS**

A. J. Viitanen, I. Hänninen, and S. A. Tretyakov

1 Introduction	98
2 Theory	99
3 Imaginary Part of $\bar{\beta}$	102
4 Impedance and Reflection Dyadic	104
5 Conclusion	108
Appendix A.	108
References	109

**Chapter 5. WAVE BEAM PROPAGATION IN LAYERED
MEDIA**

F. Bass and L. Resnick

1 Introduction	111
2 General Theory	112
3 Beams Transmitted and Reflected from the Interface	116
4 Two-Wave Problem	117
5 Integral and Difference Equations Converted into Dif- ferential Ones	118
6 Beam Propagation in a Series Chain	119
7 The Helmholtz Equation	121
8 Conclusions	122
Acknowledgment	123
References	123

**Chapter 6. MAGNETIC POTENTIAL GREEN'S
DYADICS OF MULTILAYERED WAVEGUIDE FOR
SPATIAL POWER COMBINING APPLICATIONS**

M. V. Lukic and A. B. Yakovlev

1 Introduction	126
2 Integral Equation Formulation	128
3 Magnetic Potential Green's Dyadics for a Semi- Infinite Multilayered Rectangular Waveguide	130

4	Numerical Results and Discussion	138
5	Conclusion	143
	Appendix A. Magnetic Potential Green's Dyadics for a Semi-infinite Multilayered Rectangular Waveguide Used in the Magnetic-field Integral Equation Formu- lation	143
	Appendix B. Characteristic Green's Functions for a Two-layered, Terminated Rectangular Waveguide	144
	References	145

Chapter 7. COMPARATIVE ANALYSIS BETWEEN CONICAL AND GAUSSIAN PROFILED HORN ANTENNAS

A. A. Kishk and C.-S. Lim

1	Introduction	148
2	Studied Profile	148
3	Computation	149
4	Smooth-walled Conical and Gaussian Profiled Horns .	150
5	Corrugated Conical and Gaussian Profiled Horns	154
6	Conclusion	165
	Acknowledgment	166
	References	166

Chapter 8. DIFFRACTION OF A TRANSVERSE ELECTRIC (TE) X-WAVE BY CONDUCTING OBJECTS

A. M. Attiya, E. El-Diwany, A. M. Shaarawi, and I. M. Besieris

1	Introduction	168
2	Formulation	170
3	X-Wave Scattering by a Perfectly Conducting Wedge	173
	3.1 The Direct Field	173
	3.2 The Reflected Field	174
	3.3 The Diffracted Field	176
4	Numerical Examples	181
	4.1 Scattering of a TE X-wave Incident on a Perfectly Conducting Wedge.....	182
	4.2 Scattering of a TE X-wave Incident on a Perfectly Conducting Circular Disk.....	184

5 Concluding Remarks	192
Appendix A.	193
References	195

Chapter 9. NON-RELATIVISTIC ELECTROMAGNETIC SCATTERING: “REVERSE ENGINEERING” USING THE LORENTZ FORCE FORMULAS

D. Censor

1 Introduction and Rationale	200
2 The Lorentz Formula Approach and Special Relativity	201
3 Boundary Conditions for Moving Objects.....	204
4 The Role of the Minkowski Constitutive Equations ..	206
5 Normal Scattering at a Plane Interface	208
6 Oblique Scattering at a Plane Interface	210
7 Scattering by a Lineally Moving Cylinder.....	211
8 Scattering by an Eccentrically Rotating Cylinder ...	215
9 Discussion and Concluding Remarks	219
References	220

Chapter 10. A SPECTRAL-DOMAIN SOLUTION FOR THE SCATTERING PROBLEM OF A CIRCULAR CYLINDER BURIED IN A DIELECTRIC HALF-SPACE

F. Ciambra, F. Frezza, L. Pajewski, and G. Schettini

1 Introduction	224
2 Theoretical Analysis	225
3 Numerical Solution	232
3.1 Integration of the Evanescent Spectrum	233
3.2 Integration of the Homogeneous Spectrum	234
4 Numerical Results	237
4.1 TM Polarization.....	237
4.2 TE Polarization	245
5 Conclusion	248
Appendix A. Derivatives of the Cylindrical Transmitted Wave Functions $TW_l(\xi, \zeta)$	248
References	250

Chapter 11. FAST SOLUTION FOR LARGE SCALE ELECTROMAGNETIC SCATTERING PROBLEMS USING WAVELET TRANSFORM AND ITS PRECONDITION

X. C. Wei, E. P. Li, and C. H. Liang

1	Introduction	254
2	Wavelet Moment Methods	255
2.1	The Construction of Wavelet Sequences	256
2.2	The Construction of Wavelet Transform Matrix T	258
3	Solution of Scattering Problems	259
3.1	The Solution of Induced Current for a Cube	259
3.2	The Solution of Scattering from Partially Open Cavities	262
4	A Precondition Method For Wavelet Moment Methods	264
5	Conclusion	267
	References	267

Chapter 12. APPLICABILITY OF TWO STOCHASTIC EVALUATION METHODS TO ELECTROMAGNETIC WAVE IN NEAR FIELD LEAKED FROM ITE GROUP UNDER PARALLEL WORKING SITUATION — INTRODUCTION OF SOME COMPOSITION PRINCIPLE IN SPACE AND TIME DOMAIN

M. Ohta and A. Ikuta

1	Introduction	270
2	Stochastic Evaluation Method Based on the Composition Principle in Space Domain	271
2.1	General Expression of Probability Distribution Based on Additive Rule of Cumulants	271
2.2	Generalization of Additive Property for Energy State Variable	272
3	Stochastic Evaluation Based on the Compound Low in Time Domain	273
4	Application to Electromagnetic Waves Leaked from a VDT	274
5	Conclusion	278
	Acknowledgment	278

Appendix A. Physical Meaning: Inevitability of Introducing Higher Order Stochastic Quantities to Compound EM Environment	278
References	280

Chapter 13. SCATTERING BY AN ARRAY OF CONDUCTING, LOSSY DIELECTRIC, FERRITE AND PSEUDOCHIRAL CYLINDERS

M. Polewski and J. Mazur

1 Introduction	284
2 Basic Formulation	285
2.1 Interaction Region	285
2.2 Open Structures	290
2.3 Waveguide Structures	291
3 Estimation of Numerical Errors	293
3.1 Open Structures	294
3.2 Waveguide Structures	296
4 Numerical Results and Discussion	298
4.1 Open Structures	298
4.2 Waveguide Structures	302
5 Conclusion	305
Appendix A.	306
A.1 Dielectric	306
A.2 Ferrite	306
A.3 Pseudochiral	307
References	309

Chapter 14. A FULL WAVE THREE DIMENSIONAL ANALYSIS OF FOREST REMOTE SENSING USING VHF ELECTROMAGNETIC WAVE

L. Angot, H. Roussel, and W. Tabbara

1 Introduction	312
2 Representations of a Forested Area: 2LM and 4LM..	314
2.1 The Geometry	314
2.2 The Parameters of the Forested Area	315
3 Formulation	316
3.1 Step 1: The Reference Field	316

3.2	Step 2: Green's Function of the Multilayered Media	317
3.3	Step 3: The Diffracted Field	318
3.4	Resolution of the Integral Equation by a Method of Moment	318
3.5	Calculation of the Reflection Coefficient R	320
4	Numerical Results	321
4.1	Validity of the Born Approximation	321
4.2	Influence of the Age of the Trees	324
4.3	Influence of the Representation of the Trees	325
5	Conclusion	327
Appendix A. The Dyadic Green's Function for the 2LM and the 4LM		327
A.1	The Dyadic Green's Function for the 2LM	327
A.2	The Dyadic Green's Function for the 4LM	328
Appendix B. Elements of the Matrix $[I^{kj}]$		328
References		329
